ELENI MANTIS MERCADER  
SUPERVISORY PATENT EXAMINER

The following is an examiner's statement of reasons for allowance: The prior art does not teach or suggest a magnetic navigation system for orienting a magnetically responsive medical device, having a magnet system for applying a magnetic field of at least 0.08 Tesla in any selected direction by a change of the position and/or orientation of the magnets within an exclusion zone volume; and an imaging system comprising an imaging beam source and an imaging beam detector disposed oppositely and being carried on a C-arm which can pivot about an axis generally parallel to the longitudinal axis of the subject to change the imaging angle, with the magnets of the system being configured and positioned such that the C-arm can pivot through at least about 60-degrees without impinging upon the exclusion zone of the magnets. Applicant cites critical reasoning for providing a full 60-degrees of C-arm rotation in that left and right anterior oblique images, each at 30-degrees from the mid-sagittal plane, can be acquired [0024]. It is additionally cited that the configuration achieves an extended range of imaging angles of the operating region, to provide better information about the operating region for use in navigating medical device [0006].

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".
